„Creating a safe Digital space for children"

Project number: 09.2.1-ESFA-V-726-05-0001

Project duration: 2018.05.21 – 2022.11.30

Total Grant: 3.557.931,33 Eur

The project is implemented by the National Education Agency together with Kaunas University of Technology.

Project website: https://wifi.lm.lt/

Project aims: To create opportunities for safe use of electronic services and Digital educational content in educational institutions.

Project target goup: Schools of Lithuania.

Project description and needs: Today students' achievements depend on the use modern teaching tools based on information and communication technologies (ICT). In order to organize advanced education, it is neccessary not only to create new Digital tools, but also to provide appropriate Access to use them.

Currently, smart devices are widely used in teaching and learning process. Every school has to allow children to bring their own devices, so it is neccessary to create safe and controlled wireless internet connection.

500 schools of Lithuania are participating in this project.

When the Project will be implemented:

- Lithuanian schools, which are participating in the Project, will have 2000 wireless internet zones installed. Only authorized users will be able to connect to the wireless internet and content access will be controlled.
- Content filters and Access to internet resources will be developed.
- A Professional development program (40 academic hours) and extra methodological material will be created.
- 1350 educators and school leaders will be trained to manage the parameters of the school network, organize the development of the wireless network, to use the wireless network in daily activities.
